

Roi Manager can be operated primarily with keyboard shortcuts for speed and small screens. All corresponding functions are also available in the tool windows. It can be put into into various modes, and operations such as painting rois and measuring distances have separate modes. Keyboard and mouse commands mean different things in different modes.

**NOTE:** shortcuts are unreliable when the view is not the frontmost window.

**Channels**

**Shift** + **1** to **9**

**Mode switch**

**.** + mnemonic      Enter mode

**ESC**      Idle mode

**Zoom and pan**

**Z**   **X**   **C**   **V**  
Out   In   Center   Reset

Roi paint, roi select and roa ignore modes

**.** + **R** + **P** + **Return**

**.** + **R** + **S** + **Return**

**.** + **R** + **O** + **I** + **Return**

**Mode specific shoftcuts**

The Guide tool provides contextual advice as you use Roi Manager. When changing modes it will update to show all the keyboard and mouse shorcuts available in the current mode.

Start the guide by clicking “Guide” in the playback manager.

From the guide you can also access contextual videos of workflows such as region-of-activity analysis and Roi marking.

The videos are also available on the GliLab YouTube channel.
